

HTML File Paths

A file path defines the location of a file in a web site's folder structure.

A file path is used when we link to such external files like:

- web pages
-
-
-

There exist absolute and relative file paths.

An absolute file path is the to access an internet file.

```
<!DOCTYPE html>
<html>
  <head>
    <title>Title of the document</title>
  </head>
  <body>
    <h2>Absolute File Path Example</h2>
    
  </body>
</html>
```

Try it Yourself »

A relative file path mentions a file that is relative to the current page. In the example below, the file path points out a file in the images folder that is located at the root of the current web:

```
<!DOCTYPE html>
<html>
  <head>
    <title>Title of the document</title>
  </head>
  <body>
    <h2>Relative File Path Example</h2>
    
  </body>
</html>
```
